Product description

TAMAC C-101FS Automatic Piston Cigarettes Filling Machine for SLIM 6.5 mm Filter Tubes

During a single session, it allows you to make 50 pcs, perfectly filled like factory cigarettes. It takes 7.5 minutes to make 50 cigarettes. It is the fastest and best quality product in this price class.

Supports ONLY 6.5 mm SLIM filter tubes

The filter tubes feeder allows you to insert about 50 pcs of filter tubes into it. If we feed the tubes and tobacco to the device on a regular basis, we can work without interruption in a full automatic machine. Built-in 2-stage density regulator for cigarette filling allows you to adjust the cigarette to your personal preferences.

The device is made of high quality plastic, which makes it durable, works flawlessly and looks aesthetically. The piston elements and the engine are made of metal, thanks to which the mechanism works smoothly and accurately fills cigarettes.

The filling machine has additional elements such as a rammer and a finisher, thanks to which you can improve your cigarette. To get high-quality cigarettes, use the tamping tip to finish the tobacco in the filter tubes, and then apply a filter tubes to the finisher, which wraps the paper around the tobacco as it rotates so that the tobacco does not fall out of the cigarette.

The device has built-in elements to protect the device against damage. If you use too wet / dry tobacco, the device will simply stop. In a situation where it is necessary to clean and work on tobacco moisture values.

Automatic filling machine saves time lost for making cigarettes and money spent on cigarettes bought in the store. Make yourself a cigarette and save up to 70% of the price of cigarette packs, and the quality of cigarettes is the same as from cigarettes from the store.

Required tobacco humidity 11 - 14% - only the correct tobacco humidity gives you excellent cigarettes at the filter. Tobacco straight from the store usually has a humidity of 30% - 40%. It is recommended to use a moisture meter to control the required humidity of the tobacco.

The device has the necessary CE certificate.

Operation of the filling machine is very simple: just insert the empty filter tubes into the feeder, pour the tobacco into the tray, apply the desired density and press the ON button and it's ready, the rest of the machine will do for you and you will get a ready cigarette.
